Job Description

Engineering Manager (UI) – Product Development

We are looking for a hands-on engineering manager to lead the application engineering development for our innovative SaaS platform. The right candidate will be technically strong with full-stack development experience and a hands-on mindset. S/he will be a good communicator, collaborative, and passionate about the product and our customers.

Responsibilities include:

- Drive the execution and delivery of platform features by leading a team of UI and database engineers, and collaborating with architects, product management, and Quality Assurance.
- Make critical decisions that contribute to the success of the product.
- Lead technical engagements with customers, when requested by Customer Success teams.
- Contribute to development tasks to assist team with release commitments and gaining an understanding of the deeply technical product.
- Actively drive continuous improvements and operational efficiencies.

- Ensure the team has clear priorities and adequate resources.
- Lead architecture discussions and planning.
- Provide technical guidance, career development, and mentoring to team members.
- Lead by example, maintaining high morale and motivating the team to go above and beyond.

Required Skills:

- 10+ years of software development and architecture.
- 5+ years experience leading engineering full-stack solutions in SaaS environments, with a distinguished track record on technically demanding projects.
- Strong verbal and written communication skills, organizational and time management skills.
- Ability to be nimble, proactive, comfortable working with minimal specifications.
- Demonstrate ability to architect and implement scalable cloud-based solutions for complex analytical systems.
- Knowledge of professional software engineering best practices including coding standards, code reviews, SCM, CI, build processes, testing, and operations.
- Experience with JavaScript (including ES6)/Nodejs/Typescript.
- Experience in RESTful API design and implementation, including Swagger/OAI, RAML, JSON, XML.

- Experience in database design and programming, including PL/SQL and Data modeling.
- Experience in modern web and mobile SPA programming including Angular 6/Angular 2/NativeScript.
- Experience with Project Management methodologies, including Agile/Scrum and Kanban.

Nice To Have Skills:

- Android and iOS domain knowledge, including debugging and App Store policies.
- Experience in monolith application decomposition and microservices architectures.
- Experience in security standards such as SSAE18, ISO27000, etc.
- Experience in modern DevOps workflows including containers, PaaS and CaaS- Docker, OpenShift, Kubernetes, Mesosphere/DCOS, Docker Datacentre, and tools such as Git, Jira, Jenkins, Maven/Gradle.
- Start-up Experience; Growing teams and organizations.
